

Bottle cooler Crystal - Crushed Ice

Bottle cooler made of acrylic glass with double-wall system and refined with stainless steel.

The new bottle cooler series with crushed-ice-effect create a unique and unknown optical appearance. Based on that every cooler becomes a design object which automatically all eyes are on. By the medium in the inner side of the double-walled container cooling energy is picked up much better than an unfilled situation. Therefore you will get a pro-active cooling reaction which also brings non-cooled contents to a well done drinking temperature.

In addition very interesting: By shaking the cooler you get again and again new formations of the filling - amazing!

Inner diameter: 95 mm

- high-quality stainless steel ring
- unique Crushed Ice optics
- Inner diameter: 95 mm
- Product of the Year 2006
- Home & Trend Award 2011
