

Bottle cooler RFE10***

The RFE10 is the standard among bottle coolers and can be used variably. Optionally, a stainless steel ring is available, which visually enhances the cooler if required.

The cooler is filled with a special transparent cooling liquid. The use is remarkably simple. Just put the whole bottle-cooler into the freezer for a couple of hours before use. The cooling liquid in the cooler will then freeze and keep the temperature for a longer time. Water, wine, sparkling wine and champagne will thus stay cool and fresh for up to 3 hours.

Real ice-crystals appear on the outside of the cooler during melting (real-frost-effect***)... an optical highlight, which should not be missed on any table!

Also available without cooling liquid.

Inner diameter: 85 mm

- high-performance cooling liquid
- quality at a low price
- stainless steel ring optionally available
