

Bottle cooler RFE05 - Crushed Ice

The new bottle cooler series with crushed ice effect create a unique and unknown optical appearance. Based on that every cooler becomes a design object which automatically all eyes are on. By the medium in the inner side of the double-walled container cooling energy is picked up much better than an unfilled situation. Therefore you will get a pro-active cooling reaction which also brings non-cooled contents to a well done drinking temperature.

In addition very interesting: By shaking the cooler you get again and again new formations of the filling - amazing!

Inner diameter: 68 mm

Special use: magic moments with deco and candle in winter or if he is not used as cooler.

- crushed-ice-effect
- pro-active cooling reaction
- Inner diameter: 68 mm
