

Bottle cooler RFE10 - Crushed Ice

The RFE10 is the standard among bottle coolers and can also be upgraded with a stainless steel ring if required.

The new bottle cooler series with crushed-ice-effect create a unique and unknown optical appearance. Based on that every cooler becomes a design object which automatically all eyes are on. By the medium in the inner side of the double-walled container cooling energy is picked up much better than an unfilled situation. Therefore you will get a pro-active cooling reaction which also brings non-cooled contents to a well done drinking temperature.

In addition very interesting: By shaking the cooler you get again and again new formations of the filling - amazing!

Inner diameter: 85 mm

- crushed-ice-effect
- quality at a low price
- Stainless steel ring optionally available
