

Bottle cooler RFE05

The little one under the bottle coolers. Ideal for small beer, wine or water bottles.

The cooler is filled with a special transparent cooling liquid. The use is remarkably simple. Just put the whole bottle-cooler into the freezer for a couple of hours before use. The cooling liquid in the cooler will freeze and keeps the temperature for a longer time.

Real ice-crystals appear on the outside of the cooler during melting (real-frost-effect***)... an optical highlight, which should not be missed on any table!

Inner diameter: 68 mm

- high-performance cooling liquid
- real-frost-effect
- ideal item for onpack actions
- inner diameter: 68 mm
